

# Security Risk Management

Periscope's I.R.I.S Software enables organisations to simplify their security risk management activities. The system allows for the identification and assessment of an organisations security risks in accordance with its security methodology. Using a simple to use but comprehensive task based calendar and checklist, I.R.I.S provides a secure and detailed audit trail. Security risks can be classified geographically, functionally or by assets with the ability to "drill down" to critical control points if required.

## Integrated

I.R.I.S enables organisations to simplify and improve the management of:

- Security Plans and Projects
- Security Audits
- Incident Management and Reporting
- Security Risk Assessments
- Critical Infrastructure Protection
- IT Security Management
- Business Continuity Management
- Security Compliance Obligations
- Stakeholder Reporting

## Reliable

I.R.I.S is built upon a reliable and stable SQL database that records and retains all information and activities providing a comprehensive audit trail that can be scrutinised by internal or external auditors.

I.R.I.S has clearly assigned accountabilities. There is also a document management functionality to attach or link evidence of issues completed and to monitor the progress of a particular issue.

## Contact Us

For further information please contact a Periscope Consultant on (03) 9819 6176 or 0419 557 868 or email [ian@pericons.com.au](mailto:ian@pericons.com.au)

## Intuitive

Periscope understands that every organisation is unique and needs software that can be quickly configured, to manage its evolving security obligations. Periscope's consultants can configure I.R.I.S to give instant user feedback. The client has full control over workflows, layout and language. If desired, with some training, the client can undertake their own system configuration.

## Secure

Secure and accessible, I.R.I.S makes the most of the Internet's most valuable feature, secure access. Using 128 bit encryption and MD5# personal authentication, I.R.I.S provides a high level of security and information integrity. Within the software there is an extensive range of security options ranging from fully anonymous access, that may be used to encourage reporting of security incidents - through to individual record logins using encrypted passwords to access the most sensitive security information.

Because data is entered directly to the SQL database it is immediately available for reporting, ensuring the most up to date information is available for analysis, monitoring and feedback.
