

Surveys & Questionnaires

Periscope's I.R.I.S Software enables organisations to structure the capture of information through online surveys, questionnaires and certifications. These user configurable forms have extensive workflow functionality which ensures that only relevant questions are presented to the respondents. Authorised staff can export the data to a Microsoft xls for immediate analysis, or they can use preconfigured reports that can be scheduled for particular dates.

Integrated

I.R.I.S is a fully integrated software solution that has diverse applications. It enables organisations to simplify and improve the management of their:

- Compliance Questionnaires
- Certifications Processes
- Incident Reporting
- Insurance Renewal Questionnaires
- Employee and Customer Feedback
- Online Staff Training

Reliable

I.R.I.S is built upon a stable SQL database that records and retains all information and activities providing a reliable audit trail that can be scrutinised by internal or external auditors. Significantly, should the need arise, an organisation can demonstrate that a questionnaire was completed by a specific person, including the date and time and the amendments made.

Intuitive

Periscope understands that every organisation is unique and needs surveys, questionnaires and certifications that can be amended quickly, to respond to the complex corporate landscape. I.R.I.S forms can be amended immediately, online, by authorised staff with a minimal level of training. Periscope consultants can configure the system in a collaborative environment to ensure instant user feedback. Clients have full control over workflows, layout and language.

Secure

I.R.I.S makes the most of the Internet's most valuable feature, access. Using 128 bit encryption and MD5# personal authentication, Periscope provides a high level of security and information integrity. Within the software there is an extensive range of security options including:

- anonymous
- tracked
- individually secured reports (each record has its own password)
- Make private so that only key stakeholders are aware of a records existence.
